

COVIMPACT

Results of the first questionnaire that assesses health status during the first days following a COVID-19 infection

More than
3000
participants

An average of

50

new participants
each day

Most frequent symptoms among participants

Headache

57%

Cough

56%

Muscle pain

47%

Fatigue

41%

People experiencing moderate to severe breathing difficulties

Before
infection

20%

After
infection

49%

Health related quality of life

0

Before
infection

72

88

After
infection

100

People who have **not yet received at least one dose of Covid-19 vaccine**, or who had a **chronic respiratory disease** before their Covid-19 infection are **more likely to report a decrease in quality of life and worsening breathing difficulties**.

We need you!

With **your cooperation and participation** in upcoming surveys, we will be able to increase knowledge about the long-term effects of COVID-19 and on the syndrome called "long COVID".
